#### Welcome

On behalf of ULiege and the Organizing Committee we would like to welcome you to System Simulation in Buildings 2018, the 10<sup>th</sup> International Conference of this kind organized by the Thermodynamics Laboratory and Building Energy Monitoring and Simulation (BEMS). The purpose of the conference is to bring together academics, professionals and practitioners involved in development and application of simulation tools for buildings and HVAC systems. Given the large scope of this area and the diversity of developments in this very active domain, the conference addresses multiple applications: modeling and integration of HVAC systems in buildings, energy storage, district heating networks, ventilation, control and management, integration in smart energy grids, renewable energy sources and heat pumps.

Different stages of building life cycle are covered by the 36 peer-reviewed papers submitted to the conference and the two plenary sessions: from conceptual design through building operation and to renovation.

The conference takes place in the beautiful city of Liège, with its particular prior Christmas atmosphere.

We hope that you will find the program interesting and enjoyable.

Vincent Lemort Conference Chairman

#### **General information**

#### Location

The conference will be held at the Bocholtz hotel, which is located in the city center of Liege (Place Saint-Michel 80, 4000 Liège).

#### **Internet Access**

Wi-Fi access is freely available in the conference room.

#### **Technical Information**

Oral presentations will have a 20-minutes speaking timeslot, followed by 5 minutes for discussion. It is essential that all presentations are pre-loaded on the projection computer before the session. Please submit all presentations to the secretary as soon as possible.

#### **Social Events Program**

Participant registration pack can be retrieved on the Monday morning at the entrance hall of the Bocholtz hotel from 8:30 am to 9:30 am.

A welcome drink will be held at the Bocholtz hotel on Monday evening just after the conference from 6:00 pm to 7:30 pm.

A tour and a gala dinner will be organized at the "Théâtre de Liège" building in the city center on Tuesday from 6:30 pm to 7:30 pm for the tour and from 7:30 pm to 11:00 pm for the dinner.

## **Conference Program**

#### Monday 10 December 2018: Morning sessions

08:30 – 10:00	PARTICIPANTS REGISTRATION
SESSION 1 10:00 – 10:30	OPENING SESSION
10:30 – 11:00	COFFEE BREAK
	BUILDING ENERGY SIMULATION 1  SESSION CHAIRMAN: LIEVE HELSEN  Modeling framework for the simulation and control of greenhouse climate  Queralt Altes-Buch – University of Liege
Session 2	Equivalent wall method for dynamic modelling of thermal bridges in low- energy building: application and parametric study Julien Quinten – Umons
11.00 - 12.40	Study on the Krylov Subspace Method for Computationally Efficient Building Energy Simulations  Donghun Kim – Purdue University  Speaker: Davide Ziviani
	Positive Energy Houses, envelope and systems integrated optimization by means of dynamic simulations  Pauline Abrahams – University of Liege
12:45 – 14:00	LUNCH BREAK

#### Monday 10 December 2018: Afternoon sessions

	PLENARY SESSION	
SESSION 3 14:00 – 14:50	Emerging trends in HVAC&R  Eric Winandy  Director Integrated Solutions at Emerson Commercial & Residential Solutions	
	DISTRICT HEATING NETWORKS	
	Session Chairman: Pierre Dewallef	
Session 4 14:50–15:45	Economic and environmental comparison of a centralized and a decentralized heat production for a district heating network implementation  Thibaut Résimont – University of Liege	
	Impact and detection of malfunctions on district heating networks  Antoine Fabre – Ecole des Mines de Paris	
15:45 – 16:15	COFFEE BREAK	
	INTEGRATION OF BUILDINGS IN ELECTRICITY GRIDS	
	Session Chairman: Michael Kummert	
	Hybrid Heat Pump Scenarios as a Transition towards more Flexible Buildings Anke Uytterhoeven – KU Leuven	
SESSION 5	Heat Pump Ready for Smart Grid – Evaluation of Operation Strategies Wolfram Stephan – Technische Hochschule Nürnberg	
-10.10	A methodology to evaluate hourly CO2 factors of the electricity mix to deploy the energy flexibility potential of Norwegian buildings  John Clauß – Norwegian University	
	Modelling of a village-scale Multi-Energy System (MES) for the integrated supply of electric and thermal energy  Francesco Lombardi – Politecnico di Milano	

#### **Tuesday 11 December 2018: Morning sessions**

	VENTILATION AND AIR HANDLING PROCESSES	
	SESSION CHAIRMAN: PASCAL STABAT	
	Model development of a new enthalpy exchanger under wet conditions in the frame of a single room ventilation  Antoine Parthoens – University of Liege	
Session 1 08:45 – 10:30	Cascaded liquid desiccant displacement ventilation combined with liquid desiccant membrane chilled ceiling  Kamel Ghali – American University of Beirut	
	Flexible design of a hybrid air conditioning system  Rasha Mustapha – Ecole des Mines de Paris	
	Experimental and numerical investigation on winter performance of hybrid liquid desiccant system  Ying Xie – Tsinghua University	
10:30 – 11:00	Coffee Break	
	MODELING, SIMULATION AND TESTING OF HEAT PUMPS	
	MODELING, SIMULATION AND TESTING OF HEAT PUMPS  SESSION CHAIRMAN: DAVIDE ZIVIANI  Modeling of an exhaust air heat pump used for heating and domestic hot water production  Frédéric Ransy – University of Liege	
Session 2 11:00 – 12:45	Session Chairman: Davide Ziviani  Modeling of an exhaust air heat pump used for heating and domestic hot water production	
SESSION 2 11:00 – 12:45	Session Chairman: Davide Ziviani  Modeling of an exhaust air heat pump used for heating and domestic hot water production  Frédéric Ransy – University of Liege  Multi-criteria Air Source Heat Pump Water Heater optimization combining optimized thermodynamic performance and control	
0_000	Session Chairman: Davide Ziviani  Modeling of an exhaust air heat pump used for heating and domestic hot water production  Frédéric Ransy – University of Liege  Multi-criteria Air Source Heat Pump Water Heater optimization combining optimized thermodynamic performance and control  Kevin Ruben Deutz – EDF R&D  Modeling of an air-to-water heat pump for heating and domestic hot water	
0_000	Session Chairman: Davide Ziviani  Modeling of an exhaust air heat pump used for heating and domestic hot water production  Frédéric Ransy – University of Liege  Multi-criteria Air Source Heat Pump Water Heater optimization combining optimized thermodynamic performance and control  Kevin Ruben Deutz – EDF R&D  Modeling of an air-to-water heat pump for heating and domestic hot water  Cristian Cuevas – Universidad de Concepción  Experimental Characterization of Fault Impacts on the Functioning Variables of Inverter Driven Heat Pumps	

#### **Tuesday 11 December 2018: Afternoon sessions**

	PLENARY SESSION		
SESSION 3 14:00 – 14:50	Simulation based Optimization Processes for Buildings and City Districts  Dirk Muller – RWTH Aachen University		
	INTEGRATION OF COLLECTIVE HEATING SYSTEMS IN BUILDINGS		
	SESSION CHAIRMAN: WOLFRAM STEPHAN		
Session 4	An energetic comparison between collective heating systems and individual heating systems in apartment buildings  Margot De Pauw – Kenniscentrum Energie Thomas More Geel		
14:50–16:10	Hydronic integration of heat pumps in collective heating system of buildings  Freek Van Riet – UAntwerpen		
	Solar and Heat Pump Systems: parallel vs series configurations analysis  Javier Vega – Universidad de Concepción		
16:10 – 16:40	COFFEE BREAK		
	BUILDING ENERGY SIMULATION 2		
	Session Chairman: Madjid Madjidi		
Session 5	Assessment of the Energy Performance of building facades through different testing conditions and analysis techniques  Gabrielle Masy – UCL		
16:40– 18:00	Impact of air-conditioning waste heat on air temperature in Paris during heat waves  Brice Tremeac – CNAM		
	Validation of a BES model of an all-air HVAC educational building  Bart Merema – KU Leuven		

#### Wednesday 12 December 2018: Morning sessions

	BUILDING ENERGY SIMULATION 3		
	Session Chairman: Gabrielle Masy		
Session 1	Connecting Thermal Building Simulation to Computational Fluid Dynamics - an experience report for TRNSYS and FDS		
09:10 – 10:00	Madjid Madjidi – University of Applied Sciences Munich		
	A new approach to model transport delay in branched pipes  Freek Van Riet – UAntwerpen		
10:00 – 10:30	COFFEE BREAK		
	ENERGY STORAGE IN BUILDINGS		
	Session Chairman: Assaad Zoughaib		
	Thermodynamic simulation of quasi-isothermal compressed air energy storage		
	Ghady Dib – INSA de Lyon		
Session 2	Development and Evaluation of a Rule-Based Heuristic Control Strategy for Ice Storage Systems in Residential Buildings  Aaron Tam – Purdue University		
	Speaker: Davide Ziviani		
10:30 – 12:45	Towards a subsurface predictive-model environment to simulate aquifer thermal energy storage for demand-side management applications  Tanguy Robert – University of Liege		
	Optimized control for standing column wells in cold climate  Camille Beurcq – Polytechnique Montréal		
	Development of sophisticated heat pump heating systems considering different storage technologies: A comparative simulation study  Christian Vering – RWTH Aachen University		
12:45 – 13:30	Lunch Break		

#### Wednesday 12 December 2018: Afternoon sessions

	Non-conventional HVAC systems	
	SESSION CHAIRMAN: SYLVAIN QUOILIN	
	Numerical investigation of energy potential and performance of a residential building-integrated solar micro-cogeneration system  Simon Martinez – Université de La Rochelle	
Session 3	Cascading implementation of a magnetocaloric heat pump for building space heating applications  Hicham Johra – Aalborg University	
13:30 – 15:40	Simulation of solar collectors with two low temperature heat engines for buildings applications  Vaclav Novotny – Czech Technical University in Prague	
	Dynamic modelling and control strategy of a heating system based on wood pellet boiler-stove  Van Long Lê – CENAERO	
	Evaluation of micro Combined Heat and Power systems in the Walloon residential sector through dynamic simulation  Vincent Cousin – University of Liege  Speaker: Philippe Andre	
15:40– 16:40	CLOSING SESSION
